

Section 4.4

ALEKS.

Try function given the angle
Reference Angles

We have done this:

$$\cos(\theta) = x/1$$

$$\sin(\theta) = y/1$$

$$\tan(\theta) = y/x$$

$$\left. \begin{aligned} \sec(\theta) &= 1/x \\ \csc(\theta) &= 1/y \\ \tan(\theta) &= x/y \end{aligned} \right\}$$

What do we do in practice?

Use a calculator!

The calculator is a tool with limitations.

We still have to think and understand!

units matter!
rad vs. deg.

quadrants matter
~ Keep track
by context

ex/ θ is in the 4th quadrant + $\cos(\theta) = 1/4$.
What is $\sin(\theta)$?

$$\sin(\theta) < 0 \quad \text{and} \quad \sin^2(\theta) + \cos^2(\theta) = 1$$

$$\sin^2(\theta) + (1/4)^2 = 1$$

$$\sin^2(\theta) = 1 - (1/4)^2 = 1 - 1/16 = 15/16$$

$$\sin(\theta) = -\sqrt{15}/4$$

$$\text{also } \tan(\theta) = \frac{-\sqrt{15}/4}{1/4} = -\sqrt{15}$$

(1)

ex/ θ is in the 2nd quadrant and $\sin(\theta) = 1/3$,
what is $\tan(\theta)$?

$$\tan(\theta) < 0, \cos(\theta) < 0, \sin^2(\theta) + \cos^2(\theta) = 1$$

$$\Rightarrow (1/3)^2 + \cos^2(\theta) = 1$$

$$\cos^2(\theta) = 1 - (1/3)^2 = 1 - 1/9 = 8/9$$

$$\cos(\theta) = -\sqrt{8}/3$$

$$\Rightarrow \tan(\theta) = \frac{1/3}{-\sqrt{8}/3} = -1/\sqrt{8}$$

Note: we have another tool: The reference angle.

If an angle is in std. position the reference angle, γ , is the acute angle between the terminal side and the horizontal axis.

In the prev. example we had

note it is a
mirror
image

If I can sort out the
1st quadrant I can handle
the others!

ex/ what is the ref. angle for $\theta = \frac{11}{10}\pi$?

$$\pi < \theta < \frac{3\pi}{2}$$

so Q III

$$\gamma + \pi = \frac{11\pi}{10}$$

$$\gamma = \frac{11}{10}\pi - \pi = \pi/10$$

ex/ Determine the cosine of ~~etc~~ $87\pi/4$. ugh...

$$4 \overline{) \begin{array}{r} 21 \\ 87 \\ 8 \\ 7 \\ 4 \\ 3 \end{array}}$$

$$\frac{87\pi}{4} = 21\pi + \frac{3}{4}\pi$$

$$= 20\pi + \pi + \frac{3}{4}\pi$$

$\underbrace{20\pi}_{10 \text{ rev.}}$ $\uparrow \frac{1}{2} \text{ rev.}$ $\uparrow \frac{3}{8} \text{ rev.}$

$$\frac{3\pi}{4} + \gamma = \pi \Rightarrow \gamma = \pi - \frac{3\pi}{4} = \pi/4$$

Ref. angle = $\pi/4$.

$\cos < 0$ / $\sin < 0$

$$\cos(87\pi/4) = \cos(\pi/4) = \sqrt{2}/2.$$

$$\sin(87\pi/4) = -\sin(\pi/4) = -\sqrt{2}/2.$$

ex/ what is the secant of $43\pi/4$?

$$4 \overline{) \begin{array}{r} 10 \\ 43 \\ 4 \\ 3 \end{array}}$$

$$\frac{43\pi}{4} = 10\pi + \frac{3}{4}\pi$$

\uparrow 5 rev. $\uparrow \frac{3}{8} \text{ rev.}$

$$\gamma + 3\pi/4 = \pi \Rightarrow \gamma = \pi/4$$

Ref. angle = $\pi/4$.

what is wrong w/ me

$$\sec(43\pi/4) = -\frac{1}{\cos(\pi/4)} = -\sqrt{2}.$$

ex/ what is the cosecant of 15π ?

$$15\pi = 14\pi + \pi$$

\uparrow 7 rev. $\uparrow \frac{1}{2} \text{ rev.}$

$$\pi + \gamma = \pi \Rightarrow \gamma = 0$$

The ref. angle is 0

$$\csc(0) = \frac{1}{\sin(0)} = \dots$$

uh oh!
not defined!
